

BEHOLD

The most underappreciated part in your Big Dipper.

The Wheel Wiper Assembly

You should find it around the skimming wheel. Because it's made of plastic, some users toss it, thinking it's just for protection during shipping.

The wiper blade is a vital part of your Big Dipper! Here's why:

The wiper blade acts as a trough, ushering grease captured by the skimming wheel into the grease container. Without it, grease simply flows back into the tank and, eventually, into your plumbing system. The same thing happens if debris clogs up the wiper. Be sure to clean it on a weekly basis or it won't be able to catch grease passing through. A missing or clogged wiper blade puts your business at risk of being fined for non-compliance.

Take care of the wiper blade. Your compliance depends on it.
